SHOULD YOU CONSIDER PROFESSIONALLY WHITENING YOUR TEETH?

LA Smile, the UK's Premiere Professional Tooth Whitening System has been used and recommended by thousands of customers.

Professional tooth whitening has been shown to be a safe and effective way for millions of people to obtain a whiter, brighter smile.

With *LA Smile* you will receive professional results at a fraction of the cost of a dentist.

Years of consuming coffee, tea, tobacco, wine, cola, etc, gradually causes youthful, white teeth to discolour.

LA Smile professional tooth whitening can help you bring back your bright, youthful smile.

Take home your *LA Smile* today!

Smile with Confidence

Guaranteed Results

LA Smile

is the Premier supplier of Professional Tooth Whitening Systems to the UK health & beauty industry. Our system has been developed by the worlds leading cosmetic dentists to provide a safe and effective way to obtain a dramatically whiter, brighter smile in the comfort of your own home.

PRODUCTS FROM THE CHEMIST, OR LA SMILE?

The difference is dramatic. The Professional tooth whitening systems offered by LA Smile and cosmetic dentists utilise the same active ingredient, Carbamide Peroxide. This system has been proven to dramatically change tooth colour, making teeth noticeably whiter. In many cases offering up to 10 shades of whitening. Whiteners available from chemists work very differently to professional whitening systems and are simply not effective, offering no more than 1 or 2 shades of whitening at best. Professional tooth whitening systems utilising Carbamide Peroxide have been proven safe and effective for over 10 years.

HOW DOES PROFESSIONAL TOOTH WHITENING WORK?

Professional Whitening occurs by neutralising tooth discolouration. As the Carbamide Peroxide in professional whiteners is activated, oxygen penetrates the hard outer surface of the tooth (enamel) and removes the underlying coloured or stained substances. Since enamel itself is transparent, the natural, lighter colour of the inner tooth will then show through.

HOW WHITE WILL MY TEETH GET?

LA Smile has been proven to whiten natural teeth by as many as 10 shades. Individual results may vary depending on your initial tooth colouring, lifestyle and oral hygiene regime. Ultimately LA Smile can whiten your teeth to their optimum natural shade.

IS IT SAFE?

Yes, this at home whitening system is specifically designed to be easy to use with detailed instructions. Years of research indicate that tooth whitening with Carbamide Peroxide is safe and effective with no adverse impact on fillings and no softening of the tooth enamel.

Before

After

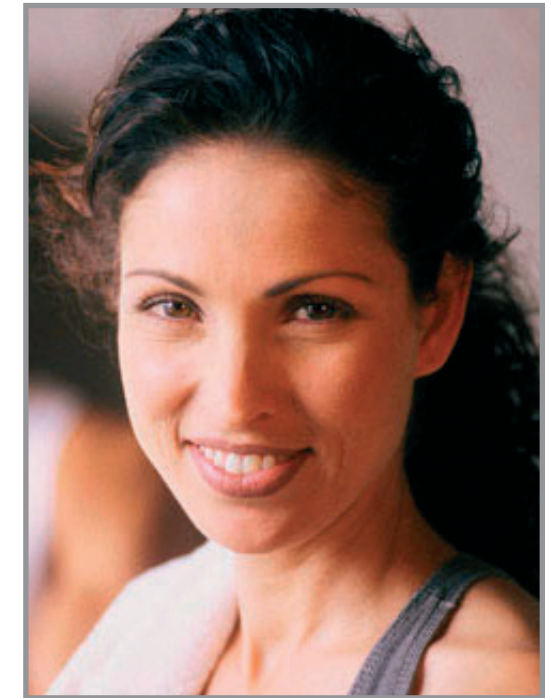

WHO CAN BENEFIT FROM PROFESSIONAL TOOTH WHITENING?

Almost everyone! Over 95% of people treated achieve significant whitening results. You can use the system without any adverse effect on any permanent artificial dental work. Caps, crowns, veneers, fillings or dentures usually do not lighten with carbamide peroxide bleaches.

Do not use while pregnant or breast-feeding, or if you have dental decay or gum disease. Recommended for adult use only.

HOW CAN LA SMILE OFFER THE SAME QUALITY PRODUCT AS A DENTIST AT SUCH AN AFFORDABLE PRICE?

As the Premiere supplier to the UK health and beauty industry we have enormous purchasing power the benefits of which we pass directly to you by minimising costs and maximising value.

HOW LONG WILL IT LAST?

Professionally whitened teeth stay bright for an extended length of time, continued consumption of staining products such as tobacco, coffee, tea, wine, soda and others may quicken discolouration. To maintain white teeth, it is recommended that periodic 'touch-up' treatments are undertaken. The duration and frequency of touch-up whitening is dependent on tooth type and lifestyle, however it can be done in just a few hours every 3-6 months. Individual gels are available and sold separately.
